DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed on June 25, 2007 has been entered. Claims 1, 5, 9, 11, and 12 have been amended. Claims 10 and 13 have been cancelled. No claims have been added. Claims 1-9, 11, and 12 are still pending in this application, with claims 1, 5, 9, 11, and 12 being independent.
2. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2, 4-6, and 8-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Egawa et al (US 5,745,694).
4. In regards to claims 1, 4, 5, 8, 9, 11, and 12, Egawa discloses a method and network of providing preferential access for particular point-to-point calls between preferred users of a communication network (See Fig. 1) wherein said particular calls are established via circuits between switching nodes, said circuits comprising one circuit segment or a plurality of circuit segments connected in series, wherein for call setup

each segment is selected from available circuit segments on a trunk between two switching nodes so that a circuit is set up enabling the calling user and the called user to communicate, which method includes the steps of: permanently reserving at least one circuit segment on each trunk between switching nodes needed to set up circuits for said particular point-to-point calls between users at least one of whom is a preferred user, a permanently reserved circuit segment being available only for said particular calls between users at least one of whom is a preferred user, and dynamically allocating circuit segments selected from said reserved segments and needed to set up a circuit from a preferred user in the event of a call set-up request by said preferred user (See col. 1 lines 50-65, col. 2-3 lines 57-2, and col. 5 lines 1-12).

5. In regards to claims 2 and 6, Egawa discloses the method and network, wherein a preferred user attribute is assigned to each user and corresponds to a particular category indication in the case of preferred users included in the calling user identifier that is transmitted for setting up a circuit at the time of a call request (See col. 5 lines 1-17).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 3 and 7 are rejected under 103(a) as being unpatentable over Egawa et al (US 5,745,694), in view of Bressler (US 6,584,190).
7. In regards to claims 3 and 7, Egawa discloses all of claims 3 and 7 limitations, except the method and network, wherein minimum-cost algorithm used to choose a circuit set up time of a call request gives priority to choosing the shortest circuit set up via one or more reserved circuit segments in series when the request emanates from a user who has a preferred user attribute relating to the call requested and uses an unreserved circuit segment of a trunk if no reserved segments of said trunk are available and said trunk has at least one unreserved segment available at the time. Bressler, however, does disclose the method and network, wherein minimum-cost algorithm used to choose a circuit set up time of a call request gives priority to choosing the shortest circuit set up via one or more circuit segments in series when the request emanates from a user who has a preferred user attribute relating to the call requested (See col. 5 lines col. 9 lines 3-29). Therefore, it would have been obvious for one of ordinary skill in the art at the time of the invention to employ this feature into the method and network, as a way of balancing and reducing the traffic load, and also reducing cost.

Response to Arguments

8. Applicant's arguments with respect to claims 1-9, 11, and 12 have been considered but are moot in view of the new ground(s) of rejection.
